

NEW

Simply smart. Simply LUXOR
LUXORliving comfort control

The Smart Home has just got a whole lot smarter Introducing the new living comfort control system **LUXORliving**

LUXORliving is the new flexible comfort control from Theben, offering all-round home comfort without the complexity of many „smart home“ systems. Switching and dimming lights, regulating the heating and controlling shutters, blinds or curtains this is what LUXORliving is all about. And the best thing: LUXORliving is so simple to install and use. Simply LUXORliving.

Simply safe. Simply LUXORliving

The smart choice for houses, flats, restaurants and bars

Living comfort control makes houses and flats more comfortable and flexible, provides a pleasant working environment in offices and creates atmosphere in bars and restaurants. What's more, living comfort control creates the optimum conditions for potential energy savings.

Where the sun heats up the glass façade at the same time every day, LUXORliving controls the blinds and provides the necessary shade. Individually or in groups – always fully automatic. In the evening LUXORliving brings the bedroom temperature down to a pleasant 18°C and in the morning, warms the bathroom to a cosy 22°C to ensure a great start to the day. Totally adapted to the needs of the occupants and seamlessly in every room all over the house at any time of the day. LUXORliving helps create a great atmosphere by switching lights on and off or dimming them based on your preferred "scenes".

What's more, LUXORliving considerably increases home security thanks to its customisable panic function. This can simulate presence in the home, for example, by simultaneously operating lights and blinds and so deterring uninvited guests from entering your property. The controls themselves are also extremely safe – via LUXORplay and WLAN.

LUXORliving offers advanced features and benefits to both the installer and the homeowner. It's easy to specify, easy to install, easy to program and most importantly for the homeowner LUXORliving is so easy to use.

LUXORliving – simply safe, simply smart.

LUXORplug

LUXORplay

LUXORplug is the simple operating software from Theben. Windows-based – speedy, safe, simple. No prior knowledge necessary.

LUXORplay is the iOS and Android app for convenient, safe and really easy operation of LUXORliving via WLAN.

Super simple. Simply super Installation and operation

LUXORliving – living comfort control as smart as it's simple. It is just as easy to install as it is to use, this makes it very appealing to both the installer and the homeowner. And for the future LUXORliving can be extended, once you have discovered the benefits and comfort of LUXORliving XL you can upgrade to XXL.

Simple start-up

LUXORliving is so simple to assemble, wire and program. No specialist software, no expensive license and no intensive training courses.

Clever presence simulation

When the occupants are at home, they use LUXORliving. When they're not at home, LUXORliving is of use to them. The clever living comfort control saves the usage patterns of the last seven days and simulates presence, while the occupants enjoy their holiday.

Free button selection

With most "smart home" systems you are stuck with their switch designs. Not with LUXORliving we use behind switch binary inputs so you can choose switches from pretty much any manufacturer. From standard white plastic to screw-less satin chrome the choice is yours.

Flexible BUS wiring

In conventional 230v wiring systems the functions are fixed because of the physical wiring connections. This is not the case with LUXORliving. LUXORliving is based on flexible BUS wiring, thanks to which lights, roller blinds or other functions can be assigned to the switches of your choice. This also gives you the ability to change the settings simply & quickly as and when your lifestyle, home layout or use of rooms changes.

Certified KNX system

This gives you the ability to change the settings simply without the need to chase walls or lift floorboards. The game changer: LUXORliving has as much KNX as is needed and as little complexity as possible. The advanced KNX functions are reduced, making LUXORliving so incredibly simple, for both the installer and the user.

Removable system control centre SysKo

If you are thinking about a "smart home" but aren't quite ready you can install LUXORliving with the basic settings fixed. This will save control centre costs whilst allowing the option of upgrading at any time. The economic, fast and simple start for those who are not ready for a full "smart home" but want their home to be future proofed.

Safe panic function

With the panic button, previously defined actions such as "All lights on" and "All blinds up" can be called up on a switch.

Individual scenarios

Lighting moods and blind positions can be freely programmed and called up at the push of a switch. This means that every member of the family can create their own perfect scenario.

Central OFF

And at bed time or when you leave the house, the Central OFF function allows all connected devices to be switched off with a single command.

Two variants

For today, tomorrow and the future

LUXORliving XL

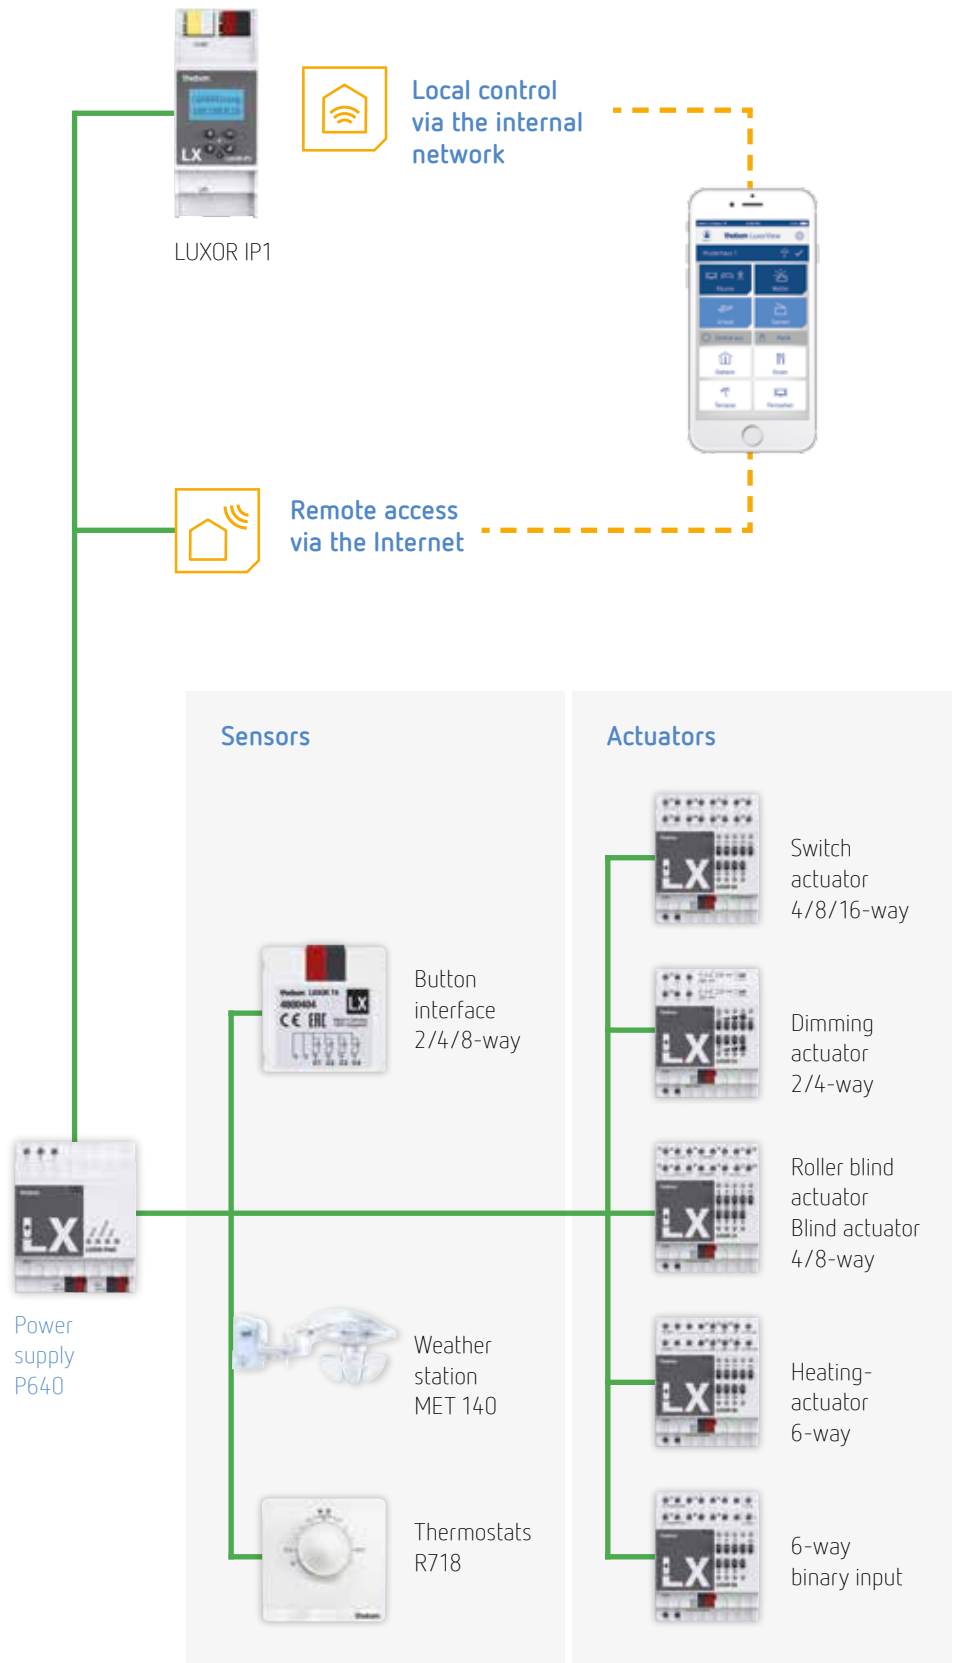

Living comfort control via your router. The ability to control your LUXORliving system from within your own four walls with your phone, tablet or PC.

Available from
Oct. 2017

LUXORliving XXL

Living comfort control via the wider internet. The ability to control your LUXORliving system wherever you are with your phone, tablet or PC. Plus additional functions such as multimedia control and energy optimization.

Available from
March 2018

For those who would like to keep their options open, LUXORliving can be installed in a basic version and then programmed. After programming the control centre stays with the installer. The user can switch over to the XL or XXL version at any time.
