**EN** Motion detector

theLuxa S360 WH 1010510

theLuxa S360 BK 1010511

## 1. Essential safety instructions

**WARNING**

**Danger of death through electric shock or fire!**

- Installation should only be carried out by a professional electrician!

- The device conforms with EN 60669-2-1 when correctly installed
- IP 55 in accordance with EN 60529

## Designated use

- Motion detector for automatic lighting control dependent on presence and brightness
- Suitable for installation on external walls or ceilings
- Suitable for entrances, garages, gardens, corridors, parks, etc.
- Only intended for installation outside of arm's reach

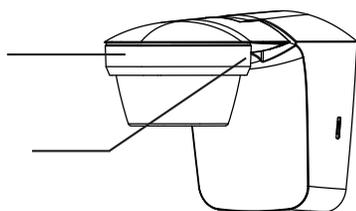

## Disposal

Dispose of the motion detector in an environmentally sound manner (electronic waste)

## 2. Description

Motion detector with sensor head

3 potentiometers for setting time (min) and brightness (lux) and sensitivity (Meter)

## 3. Connection

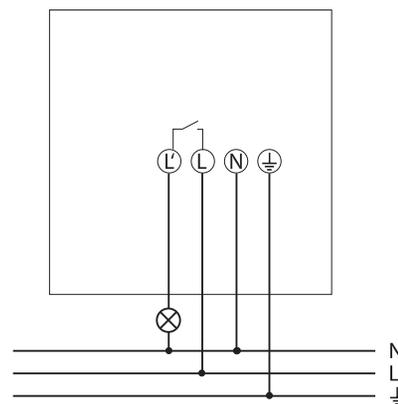

**WARNING**

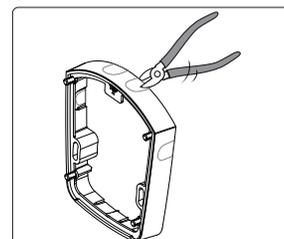

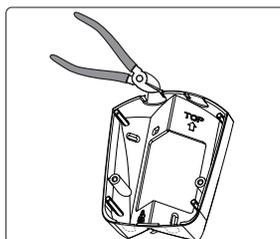

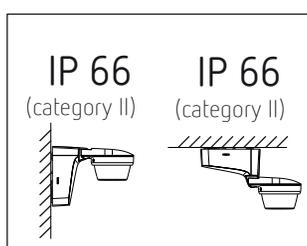

**Danger of death through electric shock!**

- Disconnect power source!
- Cover or shield any adjacent live components.
- Ensure device cannot be switched on again!

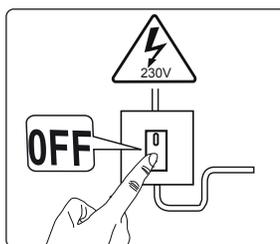

- Check power supply is disconnected!
- Earth and bypass!

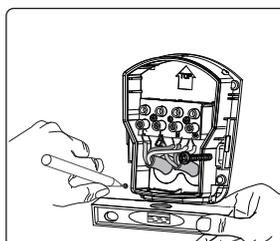

## 4. Installation

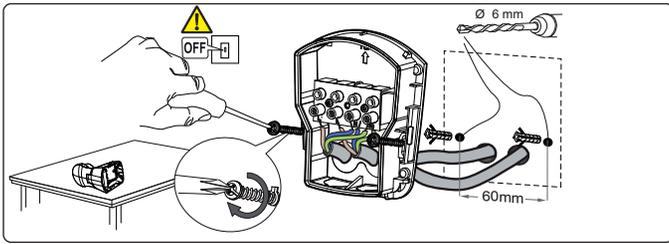

- If applicable, use optional corner bracket (9070902, 9070903) or optional spacer frame (9070906, 9070907) for flexible installation as well as cable insertion from side or top/bottom.

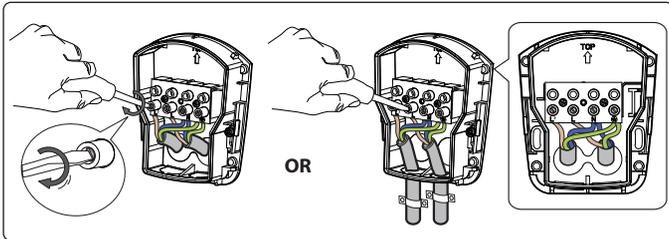

- Disconnect power source.

- Make marks for the holes on the wall (with en-closed drill template/base).
- Drill holes.

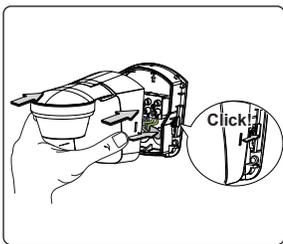

- Feed cable through the seal of the base.
- Fasten base (and spacer frame) to the wall.

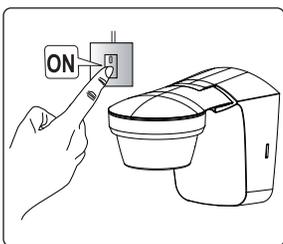

L	Phase	brown
N	Neutral conductor	blue
⊕	Earthing conductor	

L'	Switched phase	brown
N	Neutral conductor	blue
⊕	Earthing conductor	green/yellow

- Connect the individual wires to the appropriate terminal.
- Tighten screws.

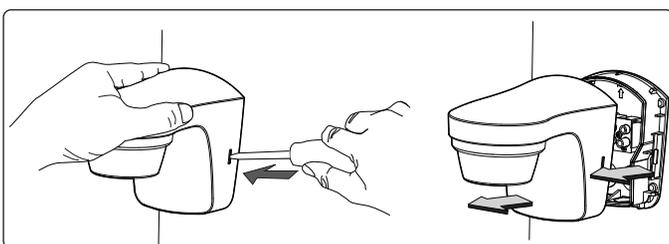

- Plug motion detector into base and click in.

- Connect motion detector to power supply.

### Dismantling

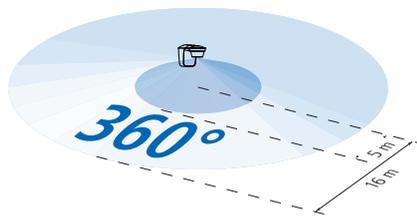

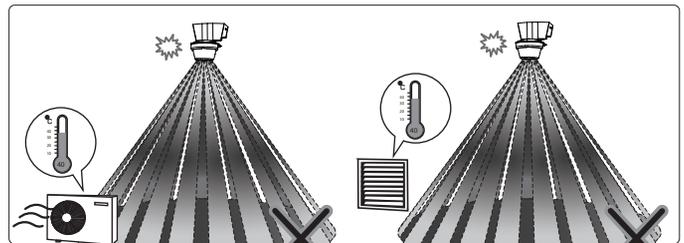

- Using the screwdriver, carefully loosen the snap-in hook at the side and pull the device forward.

### Installation instructions

As the detector reacts to variations in temperature, avoid the following situations:

- Do not direct motion detectors at objects with highly reflective surfaces such as mirrors etc.
- Do not install motion detectors near heat sources such as heating outlets, air conditioning systems, lamps etc.
- Do not direct the motion detector at objects that turn in the wind such as curtains, large plants etc.
- Take account of motion direction during test run.

- Recommended installation height: 2 – 4 m
- Crosswise detection area: 16 m (crosswise to the detector)
- Frontal detection area: 5 m (in front of the detector)
- Detection angle: 360°

### 5. Direction test and alignment

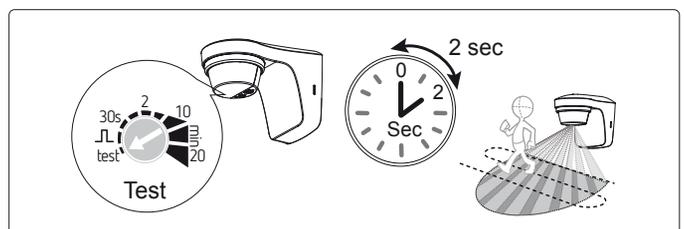

The walk test is used to test the detection range and to restrict it if necessary.

- Set the potentiometer time (min) to test.

The motion detector now only reacts to movement (independent of brightness).

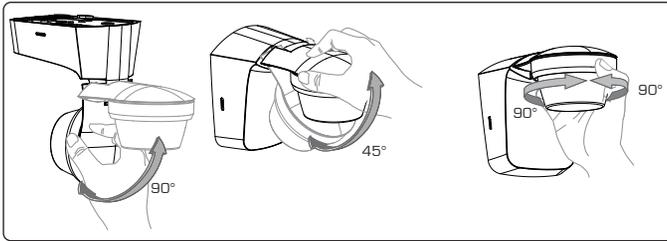

- Crosswise to the detection area. After the motion detector has detected a movement, it switches on for 2 s.

Note direction of motion during the test.

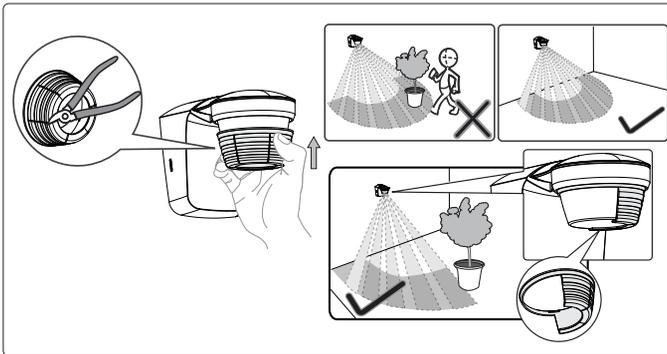

## Align motion detector with sensor head

The sensor head can be turned by 45° downwards and 90° upwards and by 90° to the left and right.

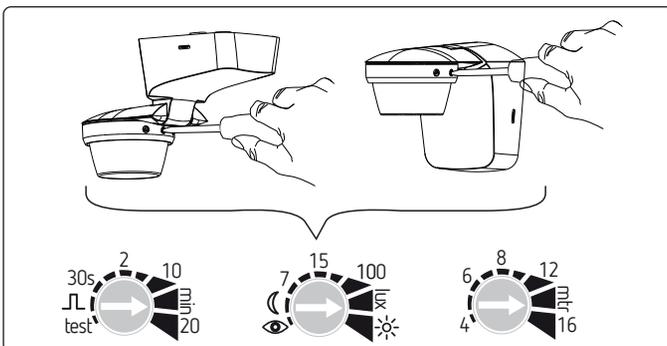

## 6. Use screens

- Use supplied screen to adjust the motion detector to desired detection area.
- Remove the required section from the screen using pliers.
- Then place on the lens and screw in.

## 7. Setting

The motion detector has 3 potentiometers underneath for setting the time (Min), brightness (Lux) and sensitivity (Meter).

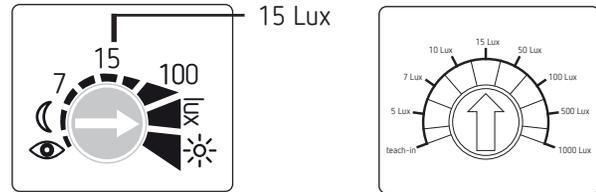

## Set brightness (lux)

You can set different brightness values (lux) with the potentiometer.

If you want to change the preset brightness (15 lux default)

- Set potentiometer to desired brightness (5 – 1000 lux).

or want a specific brightness value to be learned using the teach-in function

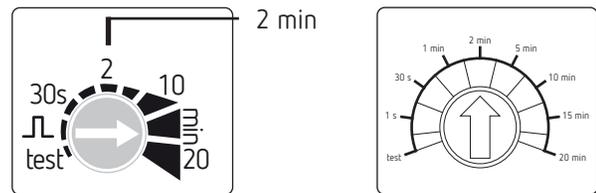

- At the desired brightness set the potentiometer to . The value will be learned after 15 s.
- Leave potentiometer at position .

## Set time (min)

If the motion detector detects no further movement, it switches off after the set time.

If you want to change the preset time (2 min default)

- Set potentiometer to desired time (1 s – 20 min).

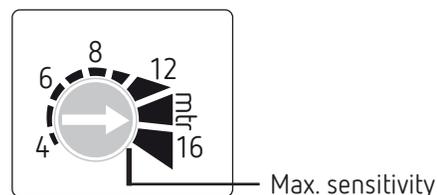

If you want to use the pulse function (e.g. for a staircase light time switch)

- Set potentiometer to position . The motion detector is switched on for < 1 s, then off for 9 s. If it detects a movement again, it switches on again for 1 s.

## Set sensitivity (Meter)

You can reduce the sensitivity of the sensor. This reduces the detection area, and minor movements (e.g. animals) are no longer detected.

- Set Potentiometer **Meter** to the desired sensitivity.

## 8. Technical data

- Operating voltage: 230 V AC, +10 % – 15 %
- Frequency: 50 Hz
- Standby: 0,5 W
- Detection angle: 360°
- Detection area: crosswise: max. 16 m,  
frontal: max. 5 m
- Installation height: 2 – 4 m
- Creep-under protection: yes
- Brightness setting range: 5 – 1000 / ∞ lux
- Switch-off delay: 1 s – 20 min
- Permissible ambient temperature: –25 °C to +45 °C
- Protection class: II
- Protection rating: IP 66 (wall mounting) and IP 66  
(ceiling installation) (category II) in  
accordance with EN 60529
- Switching capacity: 10 A (cos φ = 1)  
6 A (cos φ = 0.6)  
3 AX (cos φ = 0.3)
- Min. switching capacity: 10 mA
- Switching contact: μ-contact 230 V AC
- LED lamps <2 W 50 W
- LED lamps >2 W 500 W
- Incandescent and halogen lamp load: 2300 W
- Low-voltage halogen lamps: 2300 VA
- Fluorescent lamps (low-loss series devices):
  - uncorrected: 2300 VA
  - Series corrected: 2300 VA
  - Parallel-corrected: 1000 VA (120 μF)
- Fluorescent lamps (electronic ballast): 1000 W
- Compact fluorescent tubes  
(electronic ballast): 250 W
